

ARCTIC JET BOAT

Rescue boat

What is a perfect rescue boat like?

Safe | Stable | Seaworthy | Fast | Predictable | Jet propulsion, safe for victims in water | Roomy | Versatile, multi-purpose | Impact resistant | Service friendly | Low investment

The first test of the Arctic Wave Boat was already a complete success, showing surprisingly good stability. Even at speeds over 40 knots the boat felt safe and predictable. The test PWC had 220hp.

The hull of the Jet Boat is welded from high molecular weight polyethylene (HMWPE) and is based on the seaworthy A17 rescue boat hull. Docking and undocking the PWC is quick and easy, just unlock and drive in reverse.

The total price of the combo is cheaper than a traditional boat, and it has the power of a much bigger boat. Jet propulsion enables stationary operation and easy maneuvering around a victim.

Fantastic machine! Capacity 7 persons. Vastly expand the rescuing power of your PWC!

Equipment

Targa frame with drive light, Work lights, Plotter

Specifications

Overall Length	5,2 m
Beam	2,1 m
Draught	0,30 m
Weight	380 kg without PWC
Speed	
with 300 hp jet	50 knots
with 230 hp jet	45 knots

Specifications may be changed without prior notice.
